Website Security Checks

Website checks not performed (IP scan only).

Findings & Recommendations

1. SSH Service Exposed to Public Network

Impact: Brute-force attacks, credential theft, unauthorized remote access.

Recommendation: Restrict SSH using firewall rules, allow only trusted IPs, enforce key-based login, disable root login.

2. HTTP Service Detected

Impact: If sensitive traffic is transmitted without encryption, it may be intercepted.

Recommendation: Enable HTTPS with TLS certificates and redirect HTTP to HTTPS.
