Findings & Recommendations

1. SSH Service Exposed to Public Network

Impact: Brute-force attacks, credential theft, unauthorized remote access.

Recommendation: Restrict SSH using firewall rules, allow only trusted IPs, enforce key-based login, disable root login.

2. HTTP Service Detected

Impact: If sensitive traffic is transmitted without encryption, it may be intercepted.

Recommendation: Enable HTTPS with TLS certificates and redirect HTTP to HTTPS.

3. Missing HTTP Security Headers

Impact: Increased risk of clickjacking, XSS, data injection, and browser-based attacks.

Recommendation: Configure CSP, HSTS, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy.

4. HTTPS Not Enforced

Impact: User traffic can be intercepted or modified (MITM attacks).

Recommendation: Install TLS certificate, enable HTTPS, and force redirect from HTTP to HTTPS.
